SMS Setup: DLT and MSG91

What COG needs to do so the website can send login codes (OTP) and application updates to members by SMS.

> **Why this is needed.** In India, every organisation that sends SMS must first register on a government-mandated system called **DLT** (set up by TRAI). Without it, mobile networks block the messages, so members would never receive their login code.
>
> There are two parts: **Part A** registers COG on DLT, and **Part B** sets up MSG91, the SMS service already built into the website. Both must be done **in COG's own name**, by a person COG authorises. We will guide you on a call and take care of everything on the website side.

01 At a glance

Item	Details
Who does it	An authorised person from COG (office bearer or staff member)
DLT portal	Any one telecom operator's DLT portal. Registration on one is valid on all networks. We suggest **Jio TrueConnect** (trueconnect.jio.com) or **Vi Vilpower** (vilpower.in).
DLT cost	A registration fee of about ₹5,000 + GST (₹5,900). Some operators charge it once, some yearly. Please confirm on the portal before paying.
MSG91 cost	Pay-as-you-go SMS credit, roughly 20 to 25 paise per SMS. Please check current pricing on MSG91.
Message templates	We prepare and register the SMS wording on DLT and MSG91. COG does not need to write any messages.

02 Documents to keep ready

- [ ] PAN card of the trust (COG's own PAN, not a personal one)
- [ ] Trust registration certificate (Reg. No. F-322/BHAVNAGAR)
- [ ] GST certificate, if COG has a GST number. If not, the portal will ask for a short "no GST" declaration instead.
- [ ] Proof of COG's registered office address
- [ ] Authorisation letter on COG letterhead, signed and stamped, naming the person who will manage DLT. The portal provides the format.
- [ ] PAN or Aadhaar of that authorised person, with their mobile number
- [ ] An official COG email address, not a personal Gmail or Yahoo account. Use the same one for DLT and MSG91.
- [ ] Website: www.councilofgujarat.org

03 Part A: DLT registration

1. **Register COG as an organisation ("Principal Entity").**
   Sign up on the chosen portal, choose *Enterprise / Principal Entity*, enter COG's details, upload the documents above and pay the fee. Once approved you receive a **DLT Entity ID** (a long number).

2. **Register the Sender ID ("Header").**
   This is the 6-letter name members will see as the sender, for example *JD-COGKSI*. Choose the *Transactional / Service* type. It must clearly relate to COG's name. Our suggestions, in order of preference:

   COGKSI COGGUJ COUNCL

3. **Link MSG91 as your telemarketer.**
   TRAI rules require COG to approve the company that sends SMS on its behalf. In the DLT portal, add MSG91 as your telemarketer using the ID MSG91 provides (shown in the MSG91 dashboard; we will share it on the call). You may need to open the MSG91 account (Part B, step 1) first to get it.

04 Part B: MSG91 setup

Menu names on MSG91 change from time to time. If something looks slightly different, the step is the same.

1. **Create the account in COG's name.**
   Sign up at msg91.com with COG's official email address and the authorised person's mobile number. Use *The Council of Gujarat* as the company name, so billing and ownership stay with COG. Fill in the company profile and finish any verification MSG91 asks for.

2. **Add the Sender ID.**
   Go to *SMS → Sender ID → Add Sender ID*. Enter the Header approved on DLT and COG's **DLT Entity ID**. Choose India as the country.

3. **Add SMS credit.**
   Open *Wallet / Billing* and buy a starter pack. 5,000 to 10,000 SMS is plenty to begin with.

4. **Add us as a team member.**
   Go to *Settings → Team / Users* and invite us with access to SMS, OTP and templates. We will add the message templates and create the website's connection key from there.

5. **Leave IP restriction switched off.**
   If MSG91 offers to restrict access to fixed IP addresses, please leave it off. The website's hosting does not use a fixed address, so turning it on would block the login codes.

05 Please send us when done

Item	Example
DLT Entity ID	1201xxxxxxxxxxxxxx
Approved Header (Sender ID)	COGKSI
DLT portal access, so we can register the message templates	We will agree the safest way to do this on the call
Confirmation that MSG91 is linked as telemarketer	Screenshot from the DLT portal
MSG91 access	Team member invite, with SMS credit added

> **Please keep login details private.** Share the DLT and MSG91 login details only with the person managing them, and never in group chats. For MSG91, a team invite is enough for us.

06 What happens next

As soon as we have access, we register the message templates, connect MSG91 to the website and send test messages to COG's team. Members will then receive their login code by SMS within seconds. Until then, sign-in works in test mode only, so we recommend finishing this before the portal is opened to members.

If the DLT portal or MSG91 rejects any document, send us a screenshot of the reason and we will help fix it the same day.
